

iWASH[®]
INTELLIGENT WASHING SYSTEM

iMIX[®]

The space-saving
i-Mix provides
accurate and easy
solution blending.

iPUMP[®]

The *i-Pump* low pressure system is
a new feature on the popular *i-Mix*
system for tunnel washes, self-serve
bays, and in-bay automatics.

Less Space, High Reliability.

The *i*-Mix system is a standalone component for tunnel systems, self-serve bays, and in-bay automatics that provides space-saving benefits and reliability to all types of car wash systems and brands.

Space is at a premium in equipment rooms of all car washes. Equipment rooms are getting smaller, and drums are taking up more space. *i*-Mix changes all that. The system is compact, with a 50-inch width and 50-inch height and comes with a wall-mounting assembly, freeing floor space for other equipment or drums.

Another distinctive feature of the *i*-Mix system is the "no-float"

design. Instead of a mechanical float, *i*-Mix employs digital monitoring of liquid levels in the transparent bowls.

Unlike any other system, *i*-Mix has only one moving part. And, with no rubber diaphragm opening and closing continuously, it experiences less wear and tear. All of the features and benefits of the *i*-Mix translates into less repairs, less downtime, and lower maintenance costs over time.

The system is versatile, accommodating all manufactured chemicals. Any combination of pump or blenders can be used. It is designed for simplicity, ease of use, and installs quickly. Shelf shown here is optional.

Less Maintenance, More Fun!

The *i*-Pump has all of the features and benefits of a traditional foam dispensing system but without typical hoses and plumbing leaks. That's because the design of the *i*-Pump has eliminated a lot of the hoses that tend to break and burst in competitive products, but has all of the features of a traditional foam dispensing system.

The i-Pump low pressure system is incredibly easy to install, just plug-n-play!

The *i*-Pump's "plug-in" installation makes it easy and fast to replace the pump in case of a failure. Owners and operators will appreciate the reduced level of service calls that usually come with multiple hose style systems and complicated set-up and integration.

The *i*-Pump employs separate air pump pressures for perfect foam output. The system can also be programmed to dispense all three colors at the same time or switch from

color to color at pre-programmed intervals. Customers will enjoy the colorful effects, and more fun at the car wash means more repeat business and profitability for owners and operators.
